NEWTON'S INTENSIFIED SEX GROUP BEHAVIOUR LAW?
NEW S.G.W.U. COURSES BRING TEACHERS BACK TO SCHOOL

Local teachers will be able to bone up on the latest developments in group behaviour, sex and physics thanks to three new intensive summer courses offered by the Continuing Education division of Sir George Williams University.

Understanding Group Behaviour, a half course squeezed into the June 28 to July 10 period, is aimed at teachers concerned with open classrooms and team teaching. It will be held at Beaconsfield High School and given by Dr. Hedley G. Dimock, chairman of the department of applied social science and director of the Centre for Human Relations and Community Studies at SGWU.

Human Relations and Sexuality, another half course to be given at Beaconsfield High June 28 to July 10, is described as a laboratory course designed for those involved in sex education. Sex and sexuality as it affects self-development and relationships with others will be explored, along with research findings on the many forms of sexual behaviour. Instructor is Robert J. Nagge, program director of the Centre for Human Relations and Community Studies.

Physics for High School Science Teachers is a full course given in association with Vanier College July 3 to 27. Limited to 35 practising high school science teachers, it will put strong emphasis on the development of experimental work.

All courses will be held from 9:30 a.m. to 4:30 p.m.
